

1 Write your app's name and tagline.

CamSearch  
Make it easy and smart

2 Write a short paragraph describing your app. Make sure to mention what the app does and what problem it solves.

The working of this app is based on taking a photo of an object and it gives every possible detail about that particular object. For example, if we click a photo of fruit using this app then it will tell how many vitamins it contains and by what percent.

This app is helpful because sometimes we do not know the names of some objects so we cannot search about that object. As a result, we do not know anything about that object and we use or consume that object pointlessly which can be harmful sometimes.

3 Describe four specific functions that your app will do. List these ideas in order of importance, with the first idea being the most important.

1. The initial idea for my app is one that it gives every possible detail about a particular object by just clicking its photo.
2. It also shows similar products related to the photo the user have clicked.
3. We can also buy similar products online using this app.
4. It can also copy text from a photo and then later we can search about that copied text.

4 List 4 potential roles that are a part of your initial user target group. Then, expand on one of the roles with a detailed profile description of one of these potential users.

1. As this app can search for everything by just clicking the photo then it makes life really easier especially for those who visit a new place and want to know more thing about that place. So, they can instantly use this app to know about a particular thing without expending money on tourist guides.
2. Whenever students get a new book and if they know nothing that book, then they can use this app to get a summary of that book.
3. User doesn't have to follow a long process of clicking the photo of the object and then uploading them to search about it. They just have to click photo and they will get information easily.
4. If we point our camera on a text then we can copy that text and later on we can search about the text.

5 Come up with 4 client/designer goals for your app design. You don't have to assign these to a category (political, social, etc). List your goals in order of importance, with the first goal being the most important.

1. One of the most basic goals is that it will make life easier as it will become easier to search for anything without knowing anything about the item not even knowing its name.
2. If people do not get the same product which they are looking for then they can have more similar products to that item the user is looking for. So, it's a useful app.
3. This app will also make people more aware as they will know more about a particular object.
4. If the app works well then the designer will be benefitted financially.

6 Name and briefly describe 3 existing apps that are similar to your app idea.

1. What is this?

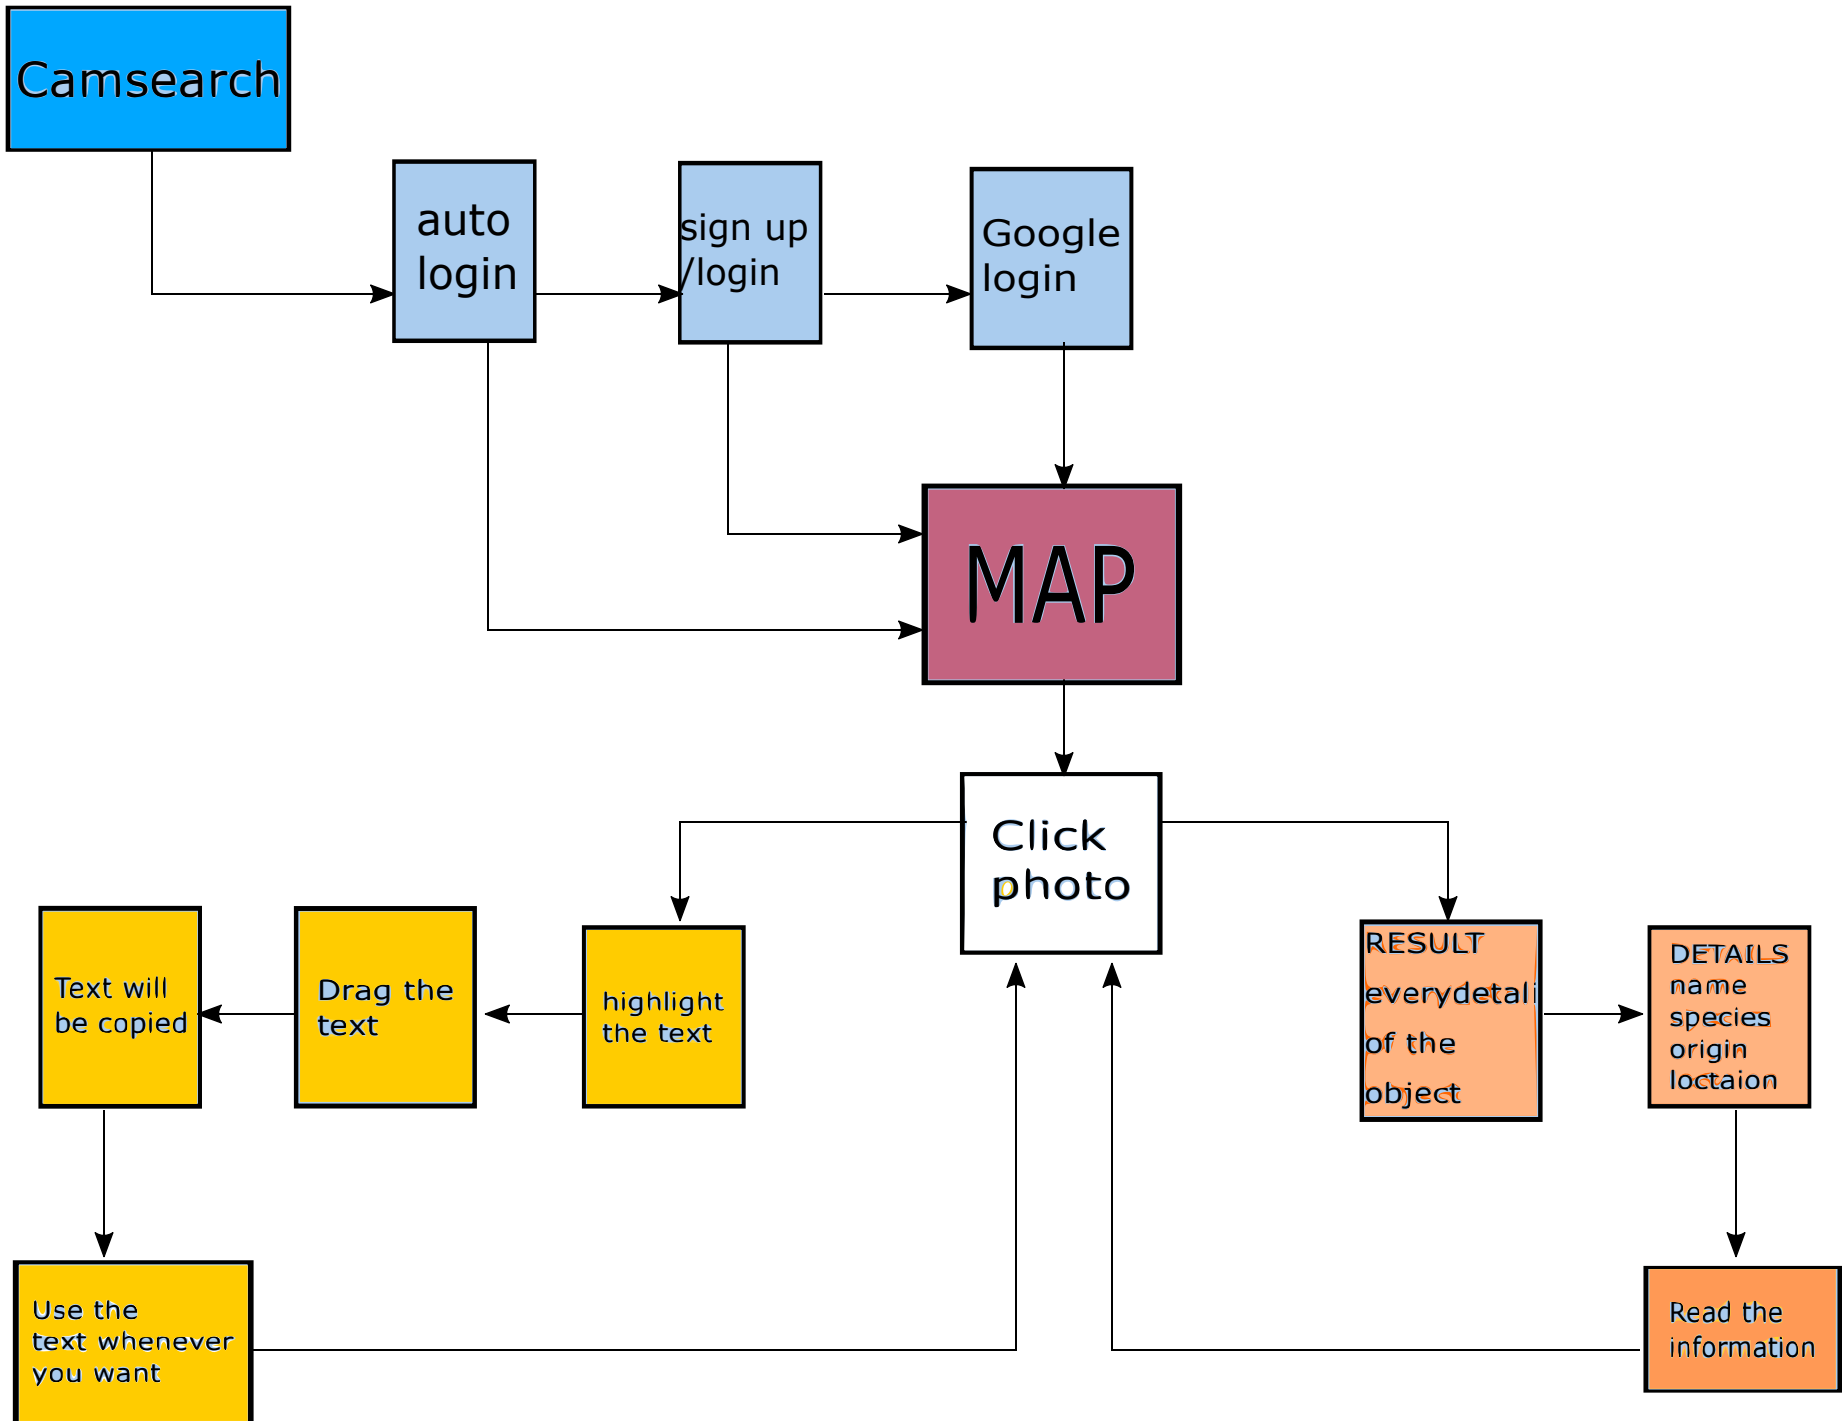

This is an AI-based computer vision app which can detect various objects that are contained inside the photo. This is a practical application that shows the development of artificial intelligence that is a taking place in the world.

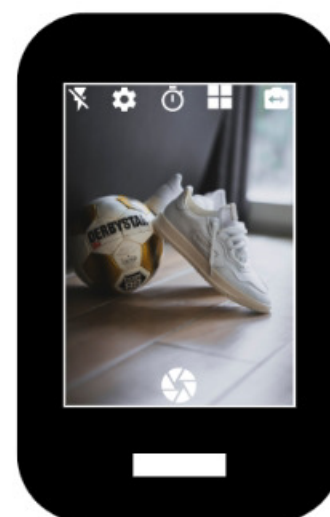

2. Search By Image

Find similar images using simple, fast search by image engine. It shows the result from multiple search engine at the same time. Support Google, TinEye, Yandex search engines.

3. Identify Anything

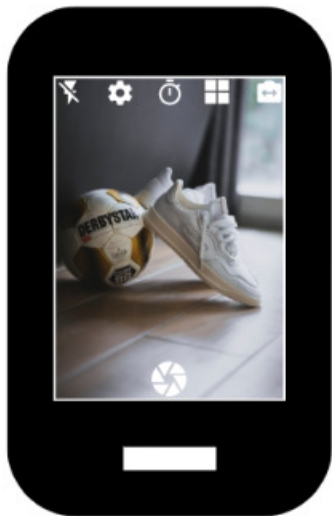

With Identify Anything, you can recognize objects, landmarks and much more. It is a powerful image recognition app. It identifies plants and animal breeds.
